Reviews

Simply no phrases to clarify. It is really basic but surprises from the 50 percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.

These facts are brought out in the following figure: --Fia. 5. Ideal geological section, showing the degradation of the tops of folds, and the direction of the force producing them. This figure serves, also, to illustrate the method of determining the direction of force in simple earth movements. The longer slope of the fold is always toward the moving force; and, after erosion has removed the tops of the folds, only the longer slope remains, as the dip of the strata. The structural features, which have been noted, may then be briefly summarized as follows: --1. The Cartersville Fault, which marks a time interval between the deposition of the semi-crystalline rocks of the Crystalline Belt and the Oostanaula Shales of the Paleozoic. 2. The apparent perfect transition between the semi-crystalline and the holo-crystalline rocks. 3. The absence, in the semi-crystalline area, of the magnesiumcorundum deposition, which characterizes the holo-crystalline area. 4. The constancy of strike and dip of the rocks of the semicrystalline and holo-crystalline areas. 5. The difference in degree of dip between the rocks of the semi-crystalline and holo-crystalline areas. 6. The absence of regional metamorphism in the eruptive portions of the holo-crystalline area, and its presence in the semi-crystalline. 7. The evidence, which testifies to an earth movement, preceding, and a continuous earth movement, following the deposition of the rocks of the semi-crystalline area. From these observations on the structure of the Crystalline Belt, three hypotheses present themselves, viz. : --1. That the...
