## AN ELEMENTARY TREATISE ON HYDROSTATICS FOR THE USE OF JUNIOR UNIVERSITY STUDENTS (PAPERBACK)

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1859 Excerpt:  $p = l$  = the pressure to be applied to change the volume from  $F$  to  $V$  Applying the result of Prop. 30 to the first case, we have  $e - e = 236 - 1 - 1$  ounces = 2623 ounces. In the second case  $e - e = 2361 - l$  ounces = 22-13 pounds. Ex. 2. If the tube in the last question had been 30 inches long, shew that the results would have been respectively 1686 ounces and 4057 pounds. Ex. 3. If an air-bubble, which is a sphere of  $j$ th inch diameter at a depth of 102 feet in water, ascends to a depth of 68 feet, show that its diameter is then  $i$ th inch, and when it ascends to a depth of 34 feet its diameter is  $r$ th inch.  $r = 794$  Ex. 4. If the volume of a gas is 100 cubic inches at the temperature 60 Fahrenheit, what will be its volume under the same pressure at 16 below the zero of Fahrenheit's scale? If  $V_0$  be the volume at the freezing point,  $V$  60 temperature,  $V - 16$  then  $F = F_0(l + a) = F_0(1 + F = F_0(l - ar) = F_0(l - 6)$ ; and since by dividing  $y = +o$ ?  $223 V = V - r = 8544$  cubic inches, 261 since  $V = 100$  cubic inches. Ex. 5. If the density of the atmospheric air is called unity at the freezing point, what is its density at the boiling point of water?  $p V$  Since generally  $= 7$ , also 100 measures of air at the freezing point become 1364 at...
